

Amendments to the claims:

This listing of claims will replace all prior versions, and listings of claims in the application.

Claim 1:(cancelled)

Claim 2:(new) An interior decorating article comprising:

an interior wall;

a recess in the interior wall;

a cabinet having an open forward portion, the cabinet being dimensioned for containment within the recess in the wall and for storing audio video equipment;

a decorative wall cover disposed directly in front of the open forward portion of the cabinet, said decorative wall cover comprising an unfinished and a finished side, the wall covering finished side comprises a framed picture or mirror;

a plurality of telescoping slide assemblies comprising interconnected load carrying, intermediate, and stationary slides movable relative to one another to extend and retract the load carrying and intermediate slides relative to the stationary slide between fully extended and retracted positions; and

a means to fasten the stationary slide to the wall and spaced apart by a distance adequate for concealment of the open forward portion of the cabinet, said stationary slides centered above and below relative to the open forward portion of the cabinet, said stationary slides are leveled, one to the other.

Amendments to the Claims (continued from page 2)

Claim 3.(new) The interior decorating article of claim 2, further comprising:

a release latch on the load carrying slide with a means to provide clearance between normally abutting faces on the nested load carrying slides and intermediate slides so that the load carrying slides and intermediate slides are separated completely.

Claim 4.(new) The interior decorating article of claim 3, wherein:

the wall cover unfinished side comprises a plurality of support beams with a means to fasten horizontally and sandwich between said wall cover unfinished side and said load carrying slides, said load carrying slides dimensioned to engage the stationary slides; and

the load carrying slides and intermediate slides may be repeatedly separated then nested with a means to engage said abutting faces and by pushing the slide members towards a fully retracted position, urges the slide members to continue their travel and be completely nested, one in the other.
